SAN JOSE SCALE.—We have a paper from the Department of Agriculture of the State of York certifying that our nurseries were examined on the 13th day of August, 1898, and found free from San Jose Scale and all other contagious plant diseases.

Rochester Commercial Nurseries

ESTABLISHED 1830.

LITTLE & CO.'S

SEMI-ANNUAL

PRICE LIST

SPRING, 1899.

TERMS AND CONDITIONS OF SALE.

The prices quoted in this List are expected to apply only where the specified quantities are taken, except as follows strictly: *Where the order amounts to \$10 or over, five hundred will be supplied at thousand rate; fifty at the hundred rate, and six at the dozen rate.*

PACKING—The prices quoted in this list do not include the cost of packing. In lots of 100 and up, the cost of packing amounts to about one cent per tree for fruit trees of ordinary size. Large ornamental trees, of course, cost more, and shrubs, roses, etc., much less.

TRANSPORTATION—In furnishing trees, etc., on the terms of this Price List we cannot be responsible for the accidents or delays of transportation. All articles after leaving the Nursery in good condition, are entirely at the risk of the purchaser.

GUARANTY—We honestly believe every tree which we send out to be genuine and true to label; and we are willing, and hold ourselves ready in every instance where a variety does not prove to be the correct one, to refund the purchase money or replace the trees, free of charge to our customer; but beyond this we do not hold ourselves liable for constructive damages by reason of errors.

OUR OFFICE, Greenhouses and Nurseries are situated at the corner of Culver and Clifford streets, about three miles from the center of the city. (Roseview Post Office.) We shall be happy to welcome our friends there, and if those intending to visit us will telephone to us before leaving the city we will meet them at the eastern end of the Parsells Avenue electric car line with carriage.

TERMS CASH, except by special agreement. On account of the perishable nature of the goods, *we decline to forward any orders C. O. D.*, unless accompanied by a remittance sufficient to secure us from possible loss.

Correspondence is invited from all those who are interested in purchasing or planting trees, either in *large or small* quantities.

Address,

LITTLE & CO.,

COMMERCIAL NURSERIES,

ROCHESTER, February, 1899.

ROCHESTER, N. Y.

HEDGE PLANTS, ETC.

BOX—Dwarf, stocky plants.....	2 50	20 00	
ARBOR VITÆ			
NORWAY SPRUCE } Different sizes—see pages 7 and 8.			
CAROLINA POPLAR—1 year, 4 to 5 feet.....		5 00	

NOTE—We know of no tree that is so well adapted for making a quick screen. It is nothing unusual for a Carolina Poplar to grow ten feet in a single season. They should be planted about 18 inches apart and then cut to about a foot from the ground. Every year or two after they should be cut back almost as far. In a month they will regain their old height.

Per Doz. Per 100. 1,000.

HORNBEAM—(CARPINUS).

A very old hedge plant. In Europe the gardeners by interweaving the top branches make a hedge so stiff that a man can walk on top of it. One of the best plants for ornamental screens. See page 4.

ROSA RUGOSA—2 years, own roots, 2 feet.....\$ 1 50 \$8 00 \$

The only rose available in this climate for hedge purposes. The foliage is thick and rough, and is never attacked by insects. The flowers are red, white and pink, single and of large size, often measuring three or four inches in diameter. They bloom all summer long, the blooms being followed by very large and showy orange and red seed pods. We cannot too highly recommend this plant for low hedges.

PRIVET—CALIFORNIA, 12 to 15 inches. (See page 9.)

PURPLE BERBERRY—Different sizes. (See page 8.)

MISCELLANEOUS.

ANEMONE JAPONICA—WHITE..... 2 50 10 00

MME. GEO. BRUANT—RUBRA AND ALBA, 1 year buds.... 2 50

BRIAR—ROSA RUBIGINOSA—(Genuine Scotch Sweet Briar), 2 years; strong..... 2 50 12 00

Penzance Hybrids—Amy Robsart (deep rose), Brenda, (peachblow), Catherine Seyton (rosy pink), Edith Bellenden (pale rose), Flora M'Ivor (pure white), Green Mantle (bright pink), Jeanie Deans (scarlet crimson), Lucy Bertram (deep crimson), Meg Merilles (crimson), Rose Bradwardine (clear rose); 1 year, strong, 2 to 3 feet..... 2 00 10 00

NOTE—The Penzance Hybrid Roses quoted above are a most interesting class, being hybrids between the old-fashioned Sweet Briar and various other roses. The flowers are single and very fragrant. The foliage, too, has the delicate fragrance of Sweet Briar.

SPECIALTIES AND NOVELTIES.

APPLES.

BEAUTY OF BATH—A very fine early apple, ripening with or before Early Harvest. *Awarded a first-class Certificate by the Royal Horticultural Society of England*, a very high honor that few apples receive. It is quite distinct from any other kind, both in appearance and time of ripening ; it is ready for use from the middle of July until the middle of August. The fruit is extremely handsome, in shape round and flattened, the ground color a yellowish green, beautifully striped and spotted with crimson towards the sun ; it has a brisk, sub-acid flavor, far superior to that of many early apples. It is a certain and free cropper, and will on this account and of its gorgeous color and finish, be a valuable and favorite market variety. In England it has taken *first prize* wherever exhibited, often in competition with forty to fifty other varieties of Dessert Apples. Trees, 30c each.

BISMARCK—The *Gardeners' Chronicle*, of London, a most conservative paper, in speaking of this apple, says : “ It furnishes an instance of precocious heavy bearing that we do not remember to have seen equaled. Eighteen rods and a half were covered with Bismarck trees of two years old upon the Doucin stock. Many of them had eleven, a few twelve, large fruits upon them, and some had none. The trees are planted in nursery rows, about three feet apart, and the plants about a foot asunder. An acre of trees cropped in such a manner would yield about five hundred bushels of fruit per acre.” The tree originated in New Zealand and is only a moderate grower. The fruit is of large size, in color deep orange yellow, shading to a bronze red. The flesh is yellow, juicy and of good quality. Season, winter. Dwarf trees, 1 year old, 40c ; Standard, 1 year old, 30c.

WALTER PEASE, Unequaled by any Apple of its season.—The Walter Pease is the finest Fall Apple grown. It stands without a peer. No fruit lover can afford to be without it. As a dessert or fancy market apple it is unequaled on account of its beauty, size and quality, and will bring more

money and sell quicker than any apple in its season. This is a big claim, but every word of it is true. Mr. E. S. Carman, of the *Rural New Yorker*, says: "The Walter Pease apple is a fine variety. We really do not know of any other apple of its season that equals it in quality." Mr. Greiner, editor *New York Farm and Fireside*, says: "I confess that I do not know the apple of its season that can be called its equal in quality."

Description.—Size very large. The fruit is very showy and attractive, and a table apple, has no superior. Fruit nearly round; color a deep red on sunny side, with splashes and stripes of red on yellow ground. Ripens in September and October. Core very small; flesh white, very fine grained; quality best, mild, juicy, slightly sub-acid, with a rich, sweet, aromatic flavor. Tree very productive, fruiting and loading heavily; strong and vigorous grower. Price, 30c.

PETER.—The best of Mr. Peter Gideon's Seedlings, and the longest keeper. It is a beautiful apple, resembles Wealthy, but four to eight weeks later. Has endured 45 degrees below zero, and borne fine crops when other hardy varieties failed. Fine quality, 30c each.

PEARS.

CONFERENCE.—A new variety, raised by Thomas Rivers & Son, England. The fruit is large, pyriform; skin dark green and russet; flesh salmon colored, melting, juicy and rich. Tree robust and hardy, making a strong, healthy growth, both on the pear and quince stocks. Very prolific, a good garden and orchard fruit, and a valuable market sort. November 1st to third week. Standard trees, 30c each.

PLUMS.

GIANT PRUNE.—Petite d'Agen X Pond's Seedling—Mr. Burbank, the introducer, thus describes his new Prune, Giant: "It is for a market, table and shipping prune that the Giant stands pre-eminent, owing to its great size, beauty of form and color, its firm, rich, sweet, delicious flesh, which separates readily from the stone, and the remarkably fine form, growth and productiveness of the tree; but besides possessing all these qualities, it makes one of the finest prunes so far known, taking into consideration its quality, size and general appearance when cured. In size it is simply enormous, specimens often running three inches in length by two inches in breadth; but besides its mammoth proportions it has a honey yellow flesh of remarkable sweetness, and so firm that it can be shipped six thousand miles in good condition. This is a case where great size and other rare qualities are combined in one fruit. The tree is a strong, handsome grower, and the fruit is produced in the utmost profusion. Price, 35c.

WICKSON.—The originator, Luther Burbank, says of this fruit: "Among the many thousand Japanese plums I have fruited, this one stands pre-eminent in its rare combination of good qualities. Fruit large, carmine, with a white bloom, and of most delicious flavor. Price, 30c.

PEACHES.

FITZGERALD.—Originated at Oakville, Ont., on the north shore of Lake Ontario, where it stands the winters perfectly, and for the past five years has cropped regularly. A native seedling of the Crawford type, as large as Crawford and larger; freestone; said to be better quality than Crawford; more attractive in appearance, and a steady cropper, owing to its hardness in wood and buds. Fitzgerald is a heavy bearer, fruiting very young, almost invariably the second year after planting, if allowed. It is undoubtedly very hardy. 30c.

CHERRIES.

CENTENNIAL.—This new variety from California is remarkable for its firmness of flesh, making it a splendid shipping sort. Ripe specimens have been kept in an ordinary room a month after gathered and were still in eating condition. The fruit is of immense size; beautiful amber, shaded red, with very firm, yet

tender, flesh; sweet, rich, luscious. It is a seedling of Napoleon Bigarreau, which it resembles in appearance, but is much larger and more ovate in form. Tree an extra good, straight and handsome grower. Its sweetness is very pronounced, being exceedingly sugary. Ripens in mid-season. 40c each.

QUINCES.

BOURGEAT—A remarkable new fruit. It grows in tree form, so vigorous and strong that it makes a tree like the pear or plum. Its foliage is very healthy, being rarely attacked by blight or fungus. The fruit is very large, smooth, golden yellow, and of the best quality. It ripens right after the Orange Quince, and one of its most remarkable qualities is that it will keep past mid-winter in perfect condition. 40c each.

STREET TREES.

We have a fine lot of large trees suitable for street planting. All have been transplanted once, and most of them twice. In furnishing street trees at prices quoted below especial pains is taken to dig them of a uniform grade, which will much add to the appearance of the street on which they are to be set.

MAPLE—Norway, 2 to 2½ inch caliper, \$1.50 each; 1½ to 2 inch, 75c each. Sugar, 2 to 2½ inch caliper, \$1.50 each.

ELMS—American, 2 inch, \$1.00 each. Scotch, 2 inch, \$1.00 each.

LAWN TREES.

PURPLE BEECH—On the whole we consider this the best of all the purple-leaved trees. There is much difference in the brightness and duration of color in different specimens of this tree. We have gone carefully over our blocks in midsummer, digging out and burning all the trees of indifferent merit, so that we now have a very fine lot left. Price, trees 3 to 4 feet high, 60c; 7-8 feet high, fine specimens, \$1.00.

THE SWEET BIRCH (*Betula Leuta*)—A well-known native tree which should be more generally planted. The bark on the young twigs is sweet, reminding one of the flavor of wintergreen. Price, trees 3 to 4 feet high, 30c.

CEDRELLA SINENSIS—A very showy, rapid-growing tree; the leaves are pinnate, resembling in form those of the Mountain Ash, but they are much larger, often growing to a length of three feet. The Cedrella is a near relation of the Ailanthus, but it has not the disagreeable odor which makes a nuisance of the latter tree for a week or so each year. Price, trees 4 to 5 feet, 60c.

LIQUIDAMAER (*Sweet Gum*)—An American tree that is distributed from New Hampshire to the Isthmus of Panama, but yet to this day is almost unknown to the majority of planters. During the summer, and at a little distance, it may easily be mistaken for an unusually dark and glossy leaved Sugar Maple; but it is distinguished from it by having leaves more star-shaped and glossy, and by the curious appearance of its secondary branches to which the bark is attached in corky ridges, as on the cork-barked Elm. But in the autumn, as Downing says: "It assumes its gayest livery, and is decked in colors almost too bright and vivid for foliage. * * * The prevailing tint of the foliage is then a deep purplish red, unlike any symptoms of decay, and quite as rich as are commonly seen in the darker blossoms of a Dutch parterre." Scott, in commenting on Downing's description, says: "We will add one trait of its autumn color—its peculiar golden bronze tone caused by the mingling of green, yellow and red leaves in its head. This tone is, at the first glance, less brilliant than the colors of the Scarlet Maple and Scarlet Oak; but as the eye rests upon the tree it drinks deeper and deeper of the colors until the tree fairly seems to glow with a fascination remotely allied to the effect produced by gazing at the clouds and sky of a gorgeous sunset."

The Liquidamber thrives best in a rather moist soil and sheltered situation. We have some fine specimens. 8 to 10 feet, 60c each; 6 to 8 feet, 50c each.

MAGNOLIAS—We have some fine plants of the Chinese Magnolias to offer this season; they all have blossom buds on and will flower this spring. We dig them with a ball of earth, and there is no reason why they should not all live. We have the following varieties: Speciosa and Alexandrine, White; Soulangiana, Pink; Lenne, Red. Price, strong plants, 4 to 6 feet, \$1.50 each.

MAPLE, SCHWEDLER'S—A fine purple-leaved variety of the Norway Maple. When the leaves first appear they are as highly colored as the best of the Purple Beeches. In about three weeks the color begins to fade, and by midsummer the leaves are as green as those of the common Norway Maple. Price, selected specimens, 8 to 10 feet, \$1.00.

PIN OAK (*Quercus Palustris*)—It is a mistake to suppose that all Oaks are slow-growing trees. Our experience with this variety in the nursery is that it is fully as rapid a grower as the Sugar or Norway Maple. Oaks should be transplanted when quite small, as their tendency is to make a tap root, which of course makes it difficult to transplant large specimens successfully. Price, trees 4 to 5 feet high, well branched, 60c.

POPLAR, CAROLINA—The most rapid-growing tree we have in the nursery. It is nothing unusual for a tree of this variety to grow ten feet in a single season. On new streets or avenues, where quick shade is required, it is a very good plan to alternate these trees with Elms or Maples. The idea being to cut out the Poplars after the permanent trees have made growth enough to give the necessary shade. Streets planted in this way will be comfortably shady in the course of three or four years. Price, trees 10 to 12 feet high, 25c.

EVERGREENS.

HOVEY'S GOLDEN ARBOR VITÆ—A most dainty little Evergreen. In form it is globular, and it rarely grows over four or five feet high. The name Golden is something of a misnomer, as the foliage is not yellow but rather a bright, healthy green, with no suggestion of sickness about it, as is often the case with the so-called golden leaved trees. A few of these trees planted in tubs make a very pretty decoration for a porch in winter. Another Evergreen valuable for this purpose is the Pyramidal Arbor Vitæ. It grows in spire shape, and makes a good contrast with the globular head of Hovey's. Price, trees 3 to 4 feet, 50c.

WEeping NORWAY SPRUCE—One of the most curious of Evergreens. The branches turn so naturally toward the earth that it is absolutely necessary to tie its leader to a stake to gain the height necessary to exhibit its charming peculiarities. When thus trained, the side branches fall directly downward, and with their rich foliage drape the stem as a robe falls around the person. Price, good specimens, 2 to 3 feet high, \$1.00 each.

SHRUBS.

We have a splendid collection of shrubs, and would invite the attention of our customers to the full list enumerated on previous pages of this circular. Here we can call attention to but a few.

Shrubs Conspicuous in Late Summer and Early Fall.

With the exception of the well known Althea, or Rose of Sharon, there is but little offered in the ordinary nursery catalogue in the shrub line that blossoms after the middle of August. Thinking that there was a need of something to brighten up the shrubbery at this time of year, we have made a specialty of a few such shrubs.

ARALIA JAPONICA and SPINOSA—These are stunning shrubs or half trees, with foliage doubly and sometimes trebly pinnate. We have measured some of the triangular leaves that were two and one-half feet long by two feet wide. The flowers, which appear about September 1st, come on the extreme top of the plant and are borne in a huge panicle three or four times the size of a Hydrangea. These plants should be planted somewhat in the background of a group of shrubs, as their tendency is to lose their foliage for three or four feet from the ground, which gives them a leggy or stalky appearance. Price, plants 18 to 20 inches, 35c each.

BACCHARIS HALIMIFOLIA—The flowers of this plant appear in June and are inconspicuous, but its seeds, with their flying attachments, which appear about the middle of September, completely cover the bush with beautiful, soft, creamy white pappi, which, unless dissected by a botanist, would be called blossoms. These pappi hang on for nearly a month. We know of no more effective shrub at this time of year. Price, 20c each.

COTONEASTER SIMMONDSII—This shrub is covered with bright scarlet berries from the middle of September till the first of November. 30c.

DESMODIUM PENDULIFOLIUM—This is one of the best of the strictly autumn blooming shrubs. Its flowers, which appear in great profusion during the month of September, are pea-shaped, very fragrant, and of a handsome reddish purple color. Price, 20c each.

OTHER SHRUBS.

LILACS—The public should more fully appreciate the tremendous improvement made in the past few years in this popular shrub. We have had the opportunity of selecting the best dozen varieties from a collection of over a hundred sorts, and we think we have done so. Price, 20c each; \$2.00 per dozen.

UPRIGHT HONEYSUCKLES—There are a few Honeysuckles, some of them of recent introduction, that deserve at least a passing mention. *Fragrantissima* blooms before its leaves appear. Its flowers are not very numerous, but as the name indicates most fragrant. One of the earliest of spring flowers. *Bella Albida*, *Bella Rosea* and *Bella Candida* have flowers much resembling the common varieties of the upright Honeysuckle, but their fruit is truly superb. It is ripe in July, and then covers the bush with glowing rubies. The individual berries are about the size and color of large cherry currants, but their skin is much thinner, which makes them to a certain extent translucent. A bush of these Honeysuckles, when covered with fruit and with the sun shining on, or better still, through it, is a sight worth going a hundred miles to see. 25c each.
